

22 Year

PAVEMENT MANAGEMENT PLAN

Fiscal Year 2021/2022 through 2042/2043

July 2021

Pavement Management Plan

Overlay Frequency & Project Selection

Overlay Frequency

The Pavement Management Plan projects listed herein consist of resurfacing existing paved roadways. Based on previous years funding, roughly 3 to 6 miles of roadways were resurfaced per annum. With roughly 437 miles of paved roadways under Nassau County's maintenance purview and previous funding, each roadway would be resurfaced every 86 years. The expected useful life of a paved roadway is 15-20 years. In some cases, with the application of preventative maintenance techniques, a roadways' useful life can be extended to 20-25 years. Staff recommended placing the roadway network on a 22-year cycle during the FY 2021/2022 annual budget and CIP planning cycle.

To adequately fund the Pavement Management Plan, an annual allocation of \$3,900,000 [in 2021 dollars] is required. This amount will allow for resurfacing roughly 18 to 20 miles of roadway per year. This frequency will allow the roadways within Nassau County to be resurfaced approximately every 22 years based on the current milws of roads and proposed funding. The necessary annual allocation of funding may fluctuate based on the value of the US dollar, prevailing wages, and cost of raw material.

Project Selection

In September 2020, the County contracted with Roadbotics to provide an app based, unbiased roadway condition survey for all paved roadways maintained by the County. The roadways are scored based on condition with the best roadways scoring a 1.00 and the worst scoring a 5.00. Those projects with the highest scores are typically placed with the highest priority on the Pavement Management Plan. Roadways classified as collector roadways will be given priority over local roadway classifications where condition scores tie. The results of this survey were delivered in June of 2021. The road condition rankings resulting from this survey were used to create a 22-year plan from 2021/2022 to 2042/2043.

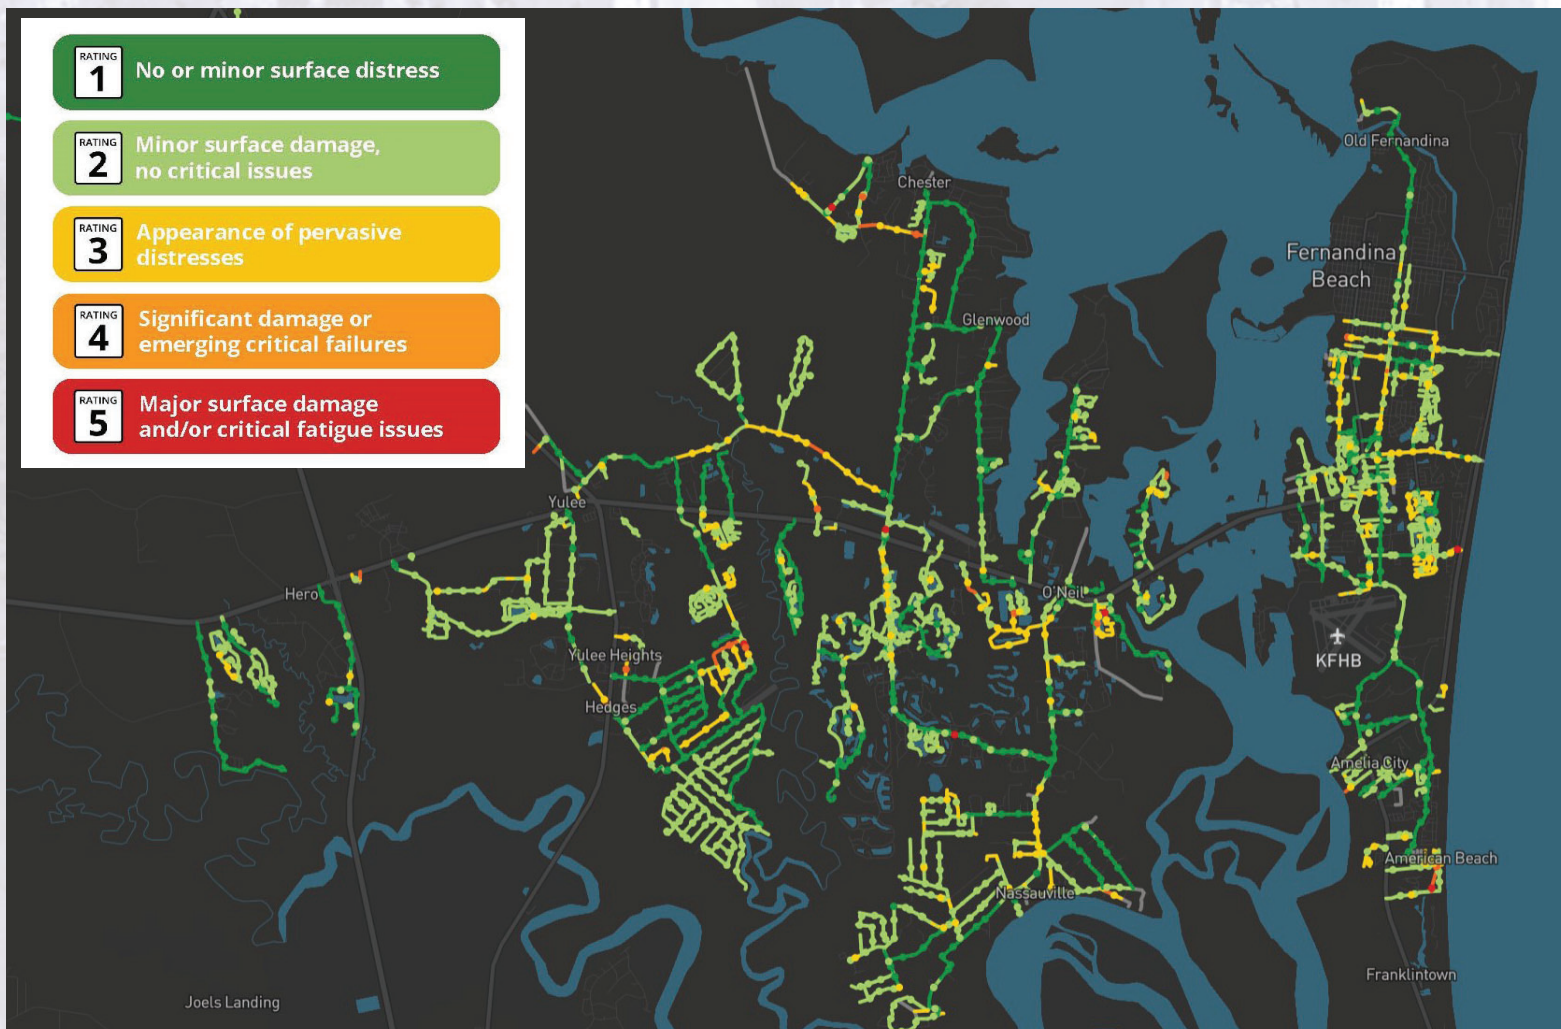

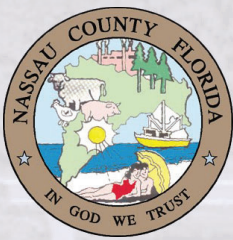

Pavement Management Plan

Overlay Frequency & Project Selection

Sustainable Plan

Not all roadways accommodate the same traffic volumes and loading, deteriorate at the same rate due to mix design, nor do they all share common environmental conditions. Storm events or changes in traffic patterns can also alter the rate at which a roadway surface breaks down. This long term plan is subject to the allocation of funds, alternative funding sources such as grants, and the relationship to other Capital Improvement Plan projects. For the aforementioned reasons this plan is not to remain static. Every three years, the roadway inventory and conditions are to be reassessed and this plan is to be updated. If roadway scores are prematurely dropping, a roadway may be moved to an earlier plan year. Conversely, if a roadway condition score is not dropping notably the roadway resurfacing may be moved to a later year.
