Date: 08/23/2022

## PROFESSIONAL ENGINEER CERTIFICATE

I, Rajesh Ramn K. Chindalur, PE #77285, certify that I currently hold an active license in the state of Florida and am competent through education or experience to provide engineering services in the civil discipline contained in this plan, print, specification, or report.

PROJECT:	<b>Breakers Campsite – Traffic Impact Study</b>
LOCATION:	Nassau County, Florida
CLIENT:	Intact Construction Management Group LLC

I further certify that this plan, print, specification, or report was prepared by me or under my responsible charge as defined in Chapter 61G15-18.001 F.A.C. Moreover, if offered by a corporation, partnership, or through a fictitious name, I certify that the company offering the engineering services, Chindalur Traffic Solutions, Inc., 8833 Perimeter Park Boulevard, Suite 103, Jacksonville, Florida 32216, holds an active certificate of authorization #30806 to provide engineering service.

*THIS ITEM HAS BEEN DIGITALLY  
SIGNED AND SEALED BY*

*ON THE DATE ADJACENT TO THE SEAL.*

*PRINTED COPIES OF THIS DOCUMENT ARE  
NOT CONSIDERED SIGNED AND SEALED  
AND THE SIGNATURE MUST BE VIRIFIED  
ON ANY ELECTRONIC COPIES.*

*CHINDALUR TRAFFIC SOLUTIONS, INC.

Appendix E3	Year 2027 Build-Out Conditions – HCM Delay and LOS Worksheets

### **Summary and Conclusions:**

A Campground/Recreational Vehicle Park that is anticipated to include 17 campsites/spots is proposed for development on the parcel located on the southwest quadrant of Sadler Road and Ryan Road intersection in the City of Fernandina Beach, FL. Access to the proposed campsite will be provided via a driveway on Sadler Road (entry only) and a driveway on Ryan Road (exit only). This traffic impact study evaluated the traffic impacts of the proposed campsite on Sadler Road and the following three intersections on Sadler Road during the weekday AM peak, PM peak and Saturday mid-day peak hour traffic conditions.

- Sadler Road at South 14<sup>th</sup> Street
- Sadler Road at Will Hardee Road
- Sadler Road at Ryan Road
- Sadler Road at Project Entrance Driveway (Build-Out Conditions Only)
- Sadler Road at Project Exit Driveway (Build-Out Conditions Only)

Existing Saturday Mid-day peak, AM peak and PM peak traffic volumes at the above stated study intersections were obtained on May 14<sup>th</sup> and May 17<sup>th</sup>, 2022.

Trip Generation for the proposed Campsite was estimated using the rates and equations included in the 11<sup>th</sup> Edition of the Trip Generation Manual, published by the Institute of Transportation Engineers (ITE). ITE Land Use Code 416 (Campground/Recreational Vehicle Park) was used to estimate the AM peak and PM peak trips anticipated from the proposed Campsite. As shown in this table, about 6 AM peak and 7 PM peak trips are anticipated to be generated by the proposed Campsite.

Future conditions analysis was performed under the year 2027 traffic volumes. The year 2027 traffic volumes were estimated by applying a growth factor of 1.1 (2.0% per year for five years). Majority of the patrons are anticipated to be entering and exiting the Campsite from the west. Hence, 80% of the project traffic is assigned to and from the west and 20% to the and from the east on Sadler Road.

The Sadler Road segments are anticipated to continue operating at LOS D or better under the year 2027 background and build-out conditions. As shown in this table, project traffic volumes are anticipated to be less than 1.0% of the roadway segments MSV.

All the critical approaches and movements at the above stated study intersections are currently operating at LOS D or better and anticipated to continue operating at LOS D or better under the year 2027 background and build-out conditions.

The westbound left turns on Sadler Road at the project entrance intersection and the eastbound project exit driveway on Ryan Road are anticipated to operate LOS C or better under the year 2027 build-out conditions. The existing center two-way left-turn lane would provide refuge to the westbound left turning project traffic on Sadler Road and an eastbound right turn lane is not anticipated to be warranted on Sadler Road at the project entrance driveway.

### **Introduction:**

A Campground/Recreational Vehicle Park that is anticipated to include 17 campsites/spots is proposed for development on the parcel located on the southwest quadrant of Sadler Road and Ryan Road intersection in the City of Fernandina Beach, FL. The location of the proposed camp site is show in **Figure 01**. Access to the proposed campsite will be provided via a driveway on Sadler Road (entry only) and a driveway on Ryan Road (exit only). A copy of the preliminary site plan is included as **Attachment A**.

As per Nassau County TIA guidelines and as discussed with staff require a traffic impact study evaluating the traffic impacts of the proposed campsite on Sadler Road and the following three intersections on Sadler Road during the weekday AM peak, PM peak and Saturday mid-day peak hour traffic conditions.

- Sadler Road at South 14<sup>th</sup> Street
- Sadler Road at Will Hardee Road
- Sadler Road at Ryan Road
- Sadler Road at Project Entrance Driveway (Build-Out Conditions Only)
- Sadler Road at Project Exit Driveway (Build-Out Conditions Only)

The study is consistent with the scope and methodology that discussed with Staff on 05/18/2022. A copy of the methodology document is included as **Attachment B**.

### **Existing Conditions**

Sadler Road is a five-section roadway with two travel lanes in each direction and a center two-way-left-turn lane. Sadler Road also has a posted speed limit of 35 miles per hour. **Figure 02** shows existing conditions on Sadler Road study intersections.

### **Data Collection:**

Existing Saturday Mid-day peak, AM peak and PM peak traffic volumes at the above stated study intersections were obtained on May 14<sup>th</sup> and May 17<sup>th</sup>, 2022. These counts were further adjusted by applying a season factor of 0.9 to account for seasonal variations. The season factor was obtained from the FDOT traffic counts portal. **Attachment C** includes the traffic counts data and FDOT season factor data. **Figure 03** shows the year 2022 AM peak, PM peak and Saturday Mid-Day peak traffic volumes at the above stated study intersections.

### **Trip Generation:**

Trip Generation for the proposed Campsite was estimated using the rates and equations included in the 11<sup>th</sup> Edition of the Trip Generation Manual, published by the Institute of Transportation Engineers (ITE). ITE Land Use Code 416 (Campground/Recreational Vehicle Park) was used to estimate the AM peak and PM peak trips anticipated from the proposed Campsite. **Table 01** summarizes the AM peak and PM peak trip generation for the proposed Campsite/Recreational Vehicle Park. As shown in this table, about 6 AM peak and 7 PM peak trips are anticipated to be generated by the proposed Campsite. ITE Trip Generation Manual does not provide trip generation rates for the Saturday Mid-day peak hours. Hence, as discussed and agreed during the

methodology meeting, the Saturday Mid-day peak trip generation was estimated by applying the ratio of weekday to weekend trips from the Hotel land use code to the Campsite weekday PM peak trips. As shown in previous stated **Table 01**, a ratio of 1.08 was applied to the weekday PM peak trips to estimate Saturday Mid-day peak trips.

#### **Year 2027 Background Traffic Volumes:**

Future conditions analysis was performed under the year 2027 traffic volumes. The year 2027 traffic volumes were estimated by applying a growth factor of 1.1 (2.0% per year for five years). The growth factor was estimated by performing trends analysis of the historical AADT on Sadler Road. The historical AADT on Sadler Road was obtained from the FDOT traffic counts online portal. **Attachment D** includes the Sandler Road historical AADT data and trends analysis plot. As shown in this trends plot, traffic on Sadler Road has a growth rate less than 2.0% per year. However, a minimum growth rate of 2.0% per year was applied to estimate a growth rate of 1.1 to estimate year 2027 background traffic volumes. **Figure 03** shows the year 2027 background conditions traffic volumes at the above stated study intersections.

#### **Project Traffic Distribution and Assignment:**

Majority of the patrons are anticipated to be entering and exiting the Campsite from the west. Hence, 80% of the project traffic is assigned to and from the west and 20% to the and from the east on Sadler Road. This distribution percentage was applied to the trip generation included in previously stated **Table 01** to determine the project traffic assignment on Sandler Road and the above stated study intersections. **Figure 04** shows the project traffic distribution and assignment on Sadler Road and at the study intersections on Sadler Road.

#### **Year 2027 Build-Out Traffic Volumes:**

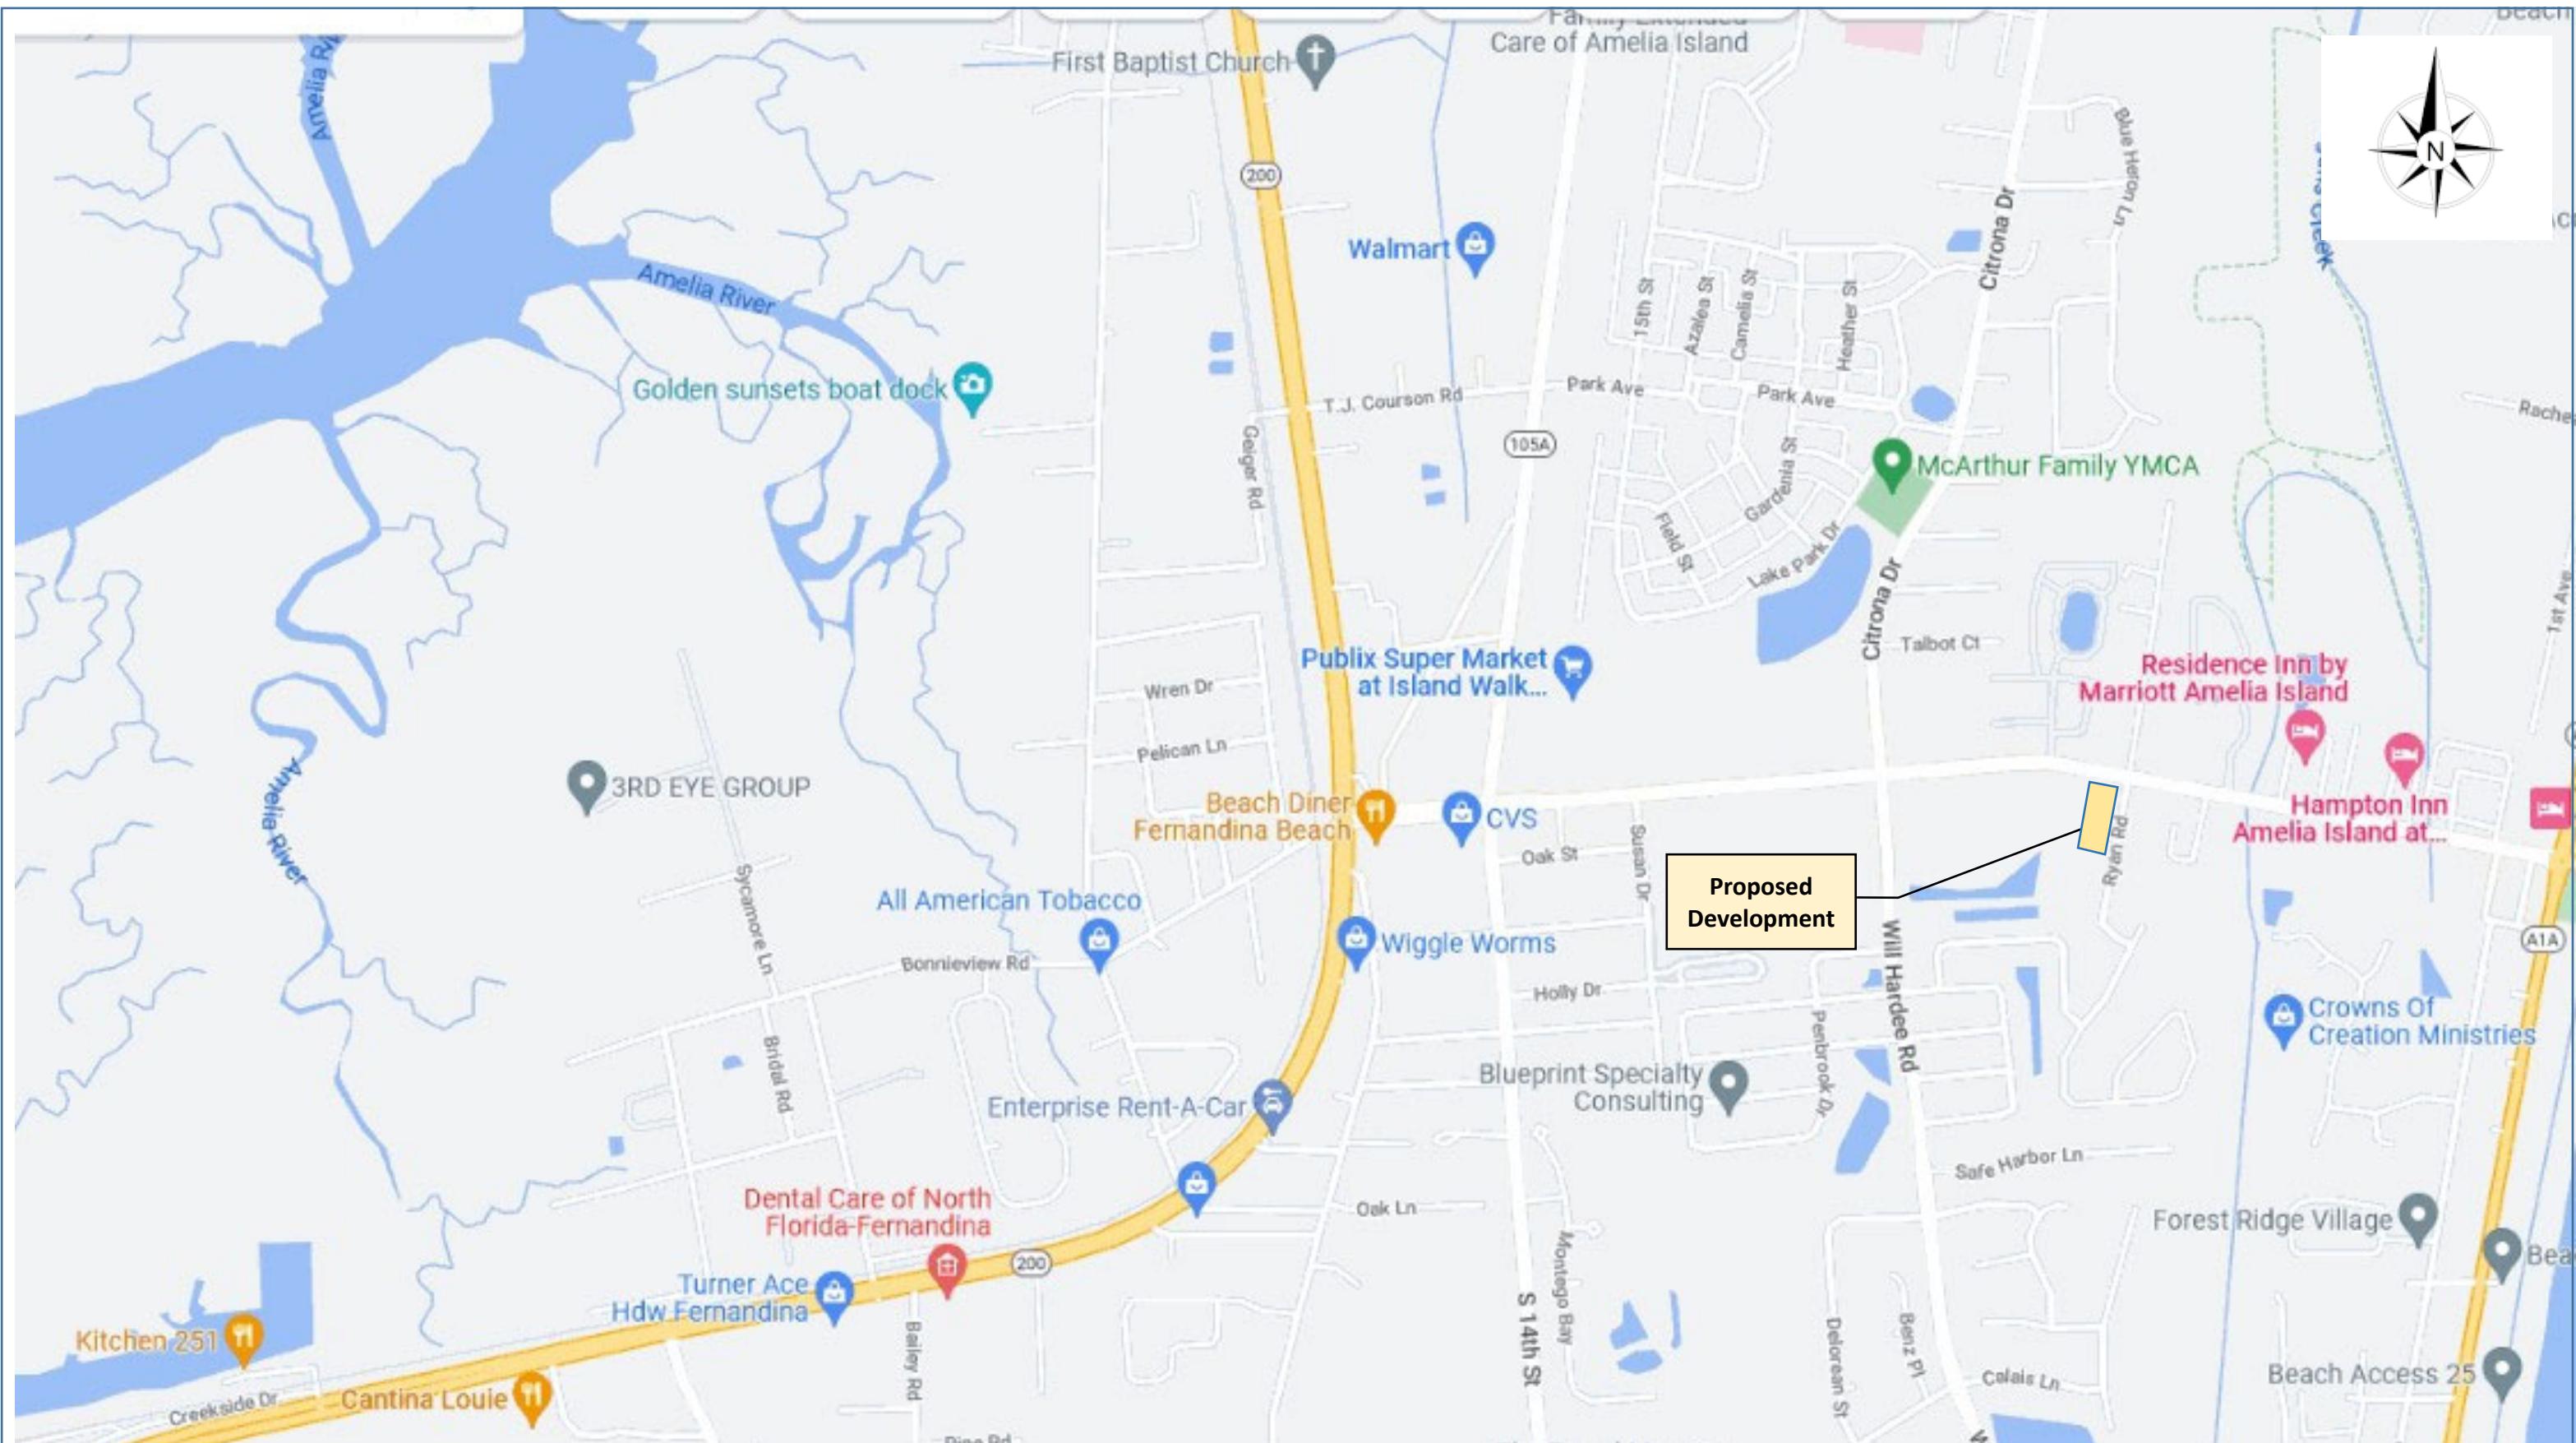

The year 2027 build-out traffic volumes include the year 2027 background traffic volumes and the project traffic distribution and assignment. **Figure 05** shows the year 2027 build-out traffic volumes on Sadler Road at the above stated study intersections and the project access driveways on Sadler Road and Ryan Road.

**Roadway Segment Analysis:** **Table 02** also summarizes roadway segments analysis on Sadler Road under the year 2022 existing conditions, year 2027 background conditions and year 2027 build-out conditions. As shown in this table, Sadler Road segments are currently operating at LOS D or better. These segments are anticipated to continue operating at LOS D or better under the year 2027 background and build-out conditions. As shown in this table, project traffic volumes are anticipated to be less than 1.0% of the roadway segments MSV.

**Intersection Capacity Analysis:** Intersection capacity analysis of the study intersections under the existing conditions, year 2027 background and year 2027 build-out conditions was performed using the Synchro 11 software. This software uses the HCM 6 criteria and methodology to determine the LOS and delay at signalized intersections. Table 03 summarizes the existing conditions year 2022, year 2027 background conditions and year 2027 build-out conditions' intersection Delay and LOS. **Attachment E** includes these HCM worksheets.

As summarized in this table, all the critical approaches and movements at the above stated study intersections are currently operating at LOS D or better and anticipated to continue operating at LOS D or better under the year 2027 background and build-out conditions.

**Project Access Intersections:** The westbound left turns on Sadler Road at the project entrance intersection and the eastbound project exit driveway on Ryan Road are anticipated to operate LOS C or better under the year 2027 build-out conditions. The existing center two-way left-turn lane would provide refuge to the westbound left turning project traffic on Sadler Road. A maximum queue of no greater than 1 vehicle is anticipated on Ryan Road at Sadler Road under the build-out conditions of the proposed Campsite. No greater than 4 eastbound right turns are anticipated on Sadler Road at the project entrance driveway. These minimal right turns are not anticipated to warrant a right turn lane.

## Study Methodology Document

**Introduction:**

A Campground/Recreational Vehicle Park that is anticipated to include 17 campsites/spots is proposed for development on the parcel located on the southwest quadrant of Sadler Road and Ryan Road intersection in the City of Fernandina Beach, FL. Access to the proposed campsite will be provided via a driveway on Sadler Road (entry only) and a driveway on Ryan Road (exit only).

Nassau County staff require a traffic impact study evaluating the traffic impacts of the proposed campsite on Sadler Road and the three intersections on Sadler Road during the weekday AM peak, PM peak and Saturday mid-day peak hour traffic conditions. This document includes the scope and methodology for the required traffic study.

**Traffic Study Tasks:**

The following is a summary of tasks will be included in the traffic study:

- Prepare a methodology document and submit to Nassau County staff for approval (This Document)
- Perform roadway segment analysis on Sadler Road (between SR 200 and Fletcher Road)
- Roadway segments traffic volumes will be obtained from the latest FDOT traffic counts database and Nassau County data bases
- The following intersections will be required to be evaluated during the weekday AM peak, PM peak and weekend mid-day peak time periods under the existing, future background and build-out conditions of the proposed campsite:
  - Sadler Road at Will Hardee Road
  - Sadler Road at 14<sup>th</sup> Street
  - Sadler Road at Ryan Road
- Obtain Saturday 24-hour hose counts on Sadler Road to determine the Saturday mid-day peak hour
- AM peak (7:00 to 9:00 AM), PM peak (4:00 to 6:00 PM) and Saturday mid-day peak period counts will be obtained at the above stated intersections
- Estimate the anticipated trip generation by the proposed development using rate and equations included in the latest edition of the ITE Trip Generation Manual.
- Weekend trip generation will be estimated using the ratio of weekday to weekend trips from the Hotel land use code as weekend trip generation for a RV Campground is not provided in the ITE trip generation manual
- Develop project traffic distribution based using existing traffic patterns on Sadler Road (Majority of the RVs are anticipated to be oriented to and from the west on Sadler Road)
- Estimate future traffic volumes by applying a minimum growth rate of 2.0% per year to the roadway and intersection traffic volumes
- Evaluate roadway segments and intersections under the future background and project build-out conditions
- Summarize the analysis and the study findings in a report suitable for a submittal to Nassau County.

# Breakers Campsite

-	-	-	Yes	+ 5%	Lanes	Median	Exclusive left lanes		Adjustment factors				
<b>One-Way Facility Adjustment</b>					2	Divided	Yes		+5%				
Multiply the corresponding two-directional volumes in this table by 0.6					Multi	Undivided	Yes		-5%				
<b>BICYCLE MODE<sup>2</sup></b>					Multi	Undivided	No		-25%				
(Multiply vehicle volumes shown below by number of directional roadway lanes to determine two-way maximum service volumes.)					<sup>1</sup> Values shown are presented as peak hour directional volumes for levels of service and are for the automobile/truck modes unless specifically stated. This table does not constitute a standard and should be used only for general planning applications. The computer models from which this table is derived should be used for more specific planning applications. The table and deriving computer models should not be used for corridor or intersection design, where more refined techniques exist. Calculations are based on planning applications of the HCM and the Transit Capacity and Quality of Service Manual.								
Paved Shoulder/Bicycle					<sup>2</sup> Level of service for the bicycle and pedestrian modes in this table is based on number of vehicles, not number of bicyclists or pedestrians using the facility.								
Lane Coverage	B	C	D	E	<sup>3</sup> Buses per hour shown are only for the peak hour in the single direction of the higher traffic flow.								
0-49%	*	260	680	1,770	* Cannot be achieved using table input value defaults.								
50-84%	190	600	1,770	>1,770	** Not applicable for that level of service letter grade. For the automobile mode, volumes greater than level of service D become F because intersection capacities have been reached. For the bicycle mode, the level of service letter grade (including F) is not achievable because there is no maximum vehicle volume threshold using table input value defaults.								
85-100%	830	1,700	>1,770	**	<i>Source:</i> Florida Department of Transportation Systems Implementation Office <a href="https://www.fdot.gov/planning/systems/">https://www.fdot.gov/planning/systems/</a>
